WHO CAN DO WHAT

HealthMate+ roles and patient groups

Three account roles have different pages. Students and faculty are patient records, not sign-in roles.

GUARDIAN

Guardian

Linked students

Student Health Record; request appointments; view visit history.

SCHOOL NURSE

School nurse

Student and faculty patients

Maintain clinical records; review forms; visits, appointments, stock, reports; approve risk rules.

SYSTEM ADMINISTRATOR

System administrator

Accounts, reports and clinic setup

Invite users; import rosters; send notices; manage access and risk-rule drafts.

Patient records

Students

Guardian accounts link to student records. Students do not sign in.

Faculty

Faculty records are for clinic care and appointments; faculty do not sign in.

Save keeps a draft or record. Submit sends a form for review. Accept adds reviewed answers to the patient profile. Appointment Complete changes status; it does not save a visit.

01

ACCOUNT ACCESS

Invite and activate an account

Administrator sends the invitation; the recipient accepts the link and activates the account.

ADMINISTRATOR SENDS • RECIPIENT ACTIVATES

1 Add new user
Enter Name, Email, Role. For guardian: choose Linked student and Relationship.

2 Send invitation
Attempts email delivery of the activation link; check the screen result.

3 Open secure link
Invitee uses the link within 72 hours.

4 Activate account
Enter Username, Password, Confirm password; choose Activate account.

If delivery fails, check the screen result. For a missing or expired link, Administrator opens Users and chooses Resend invitation; the recipient still chooses Activate account. Student records do not have sign-in accounts.

02

ACCOUNT ACCESS

Sign in or recover a password

Choose one route from the Sign in screen. Each route ends at a separate result.

ACCOUNT HOLDER • SIGN IN ROUTE

1. **Enter account details**
   Email / Username; Password.
2. **Sign in securely**
   Production asks for a 6-digit email code.
3. **Verify and continue**
   Enter Verification code, then choose this button.
4. **Role home opens**
   Pages available for this role.

ACCOUNT HOLDER • PASSWORD RECOVERY

1. **Forgot password?**
   Choose this link; then enter Email / Username.
2. **Send reset code**
   Then enter the code sent to email.
3. **Set new password**
   Enter New password and Confirm password.
4. **Reset password**
   Return to Sign in; existing sessions are revoked.

Invalid/expired sign-in code: choose Back to sign in, then Sign in securely to request another code.
Invalid/expired reset code: choose Send reset code again. Reset-code email delivery is not guaranteed.

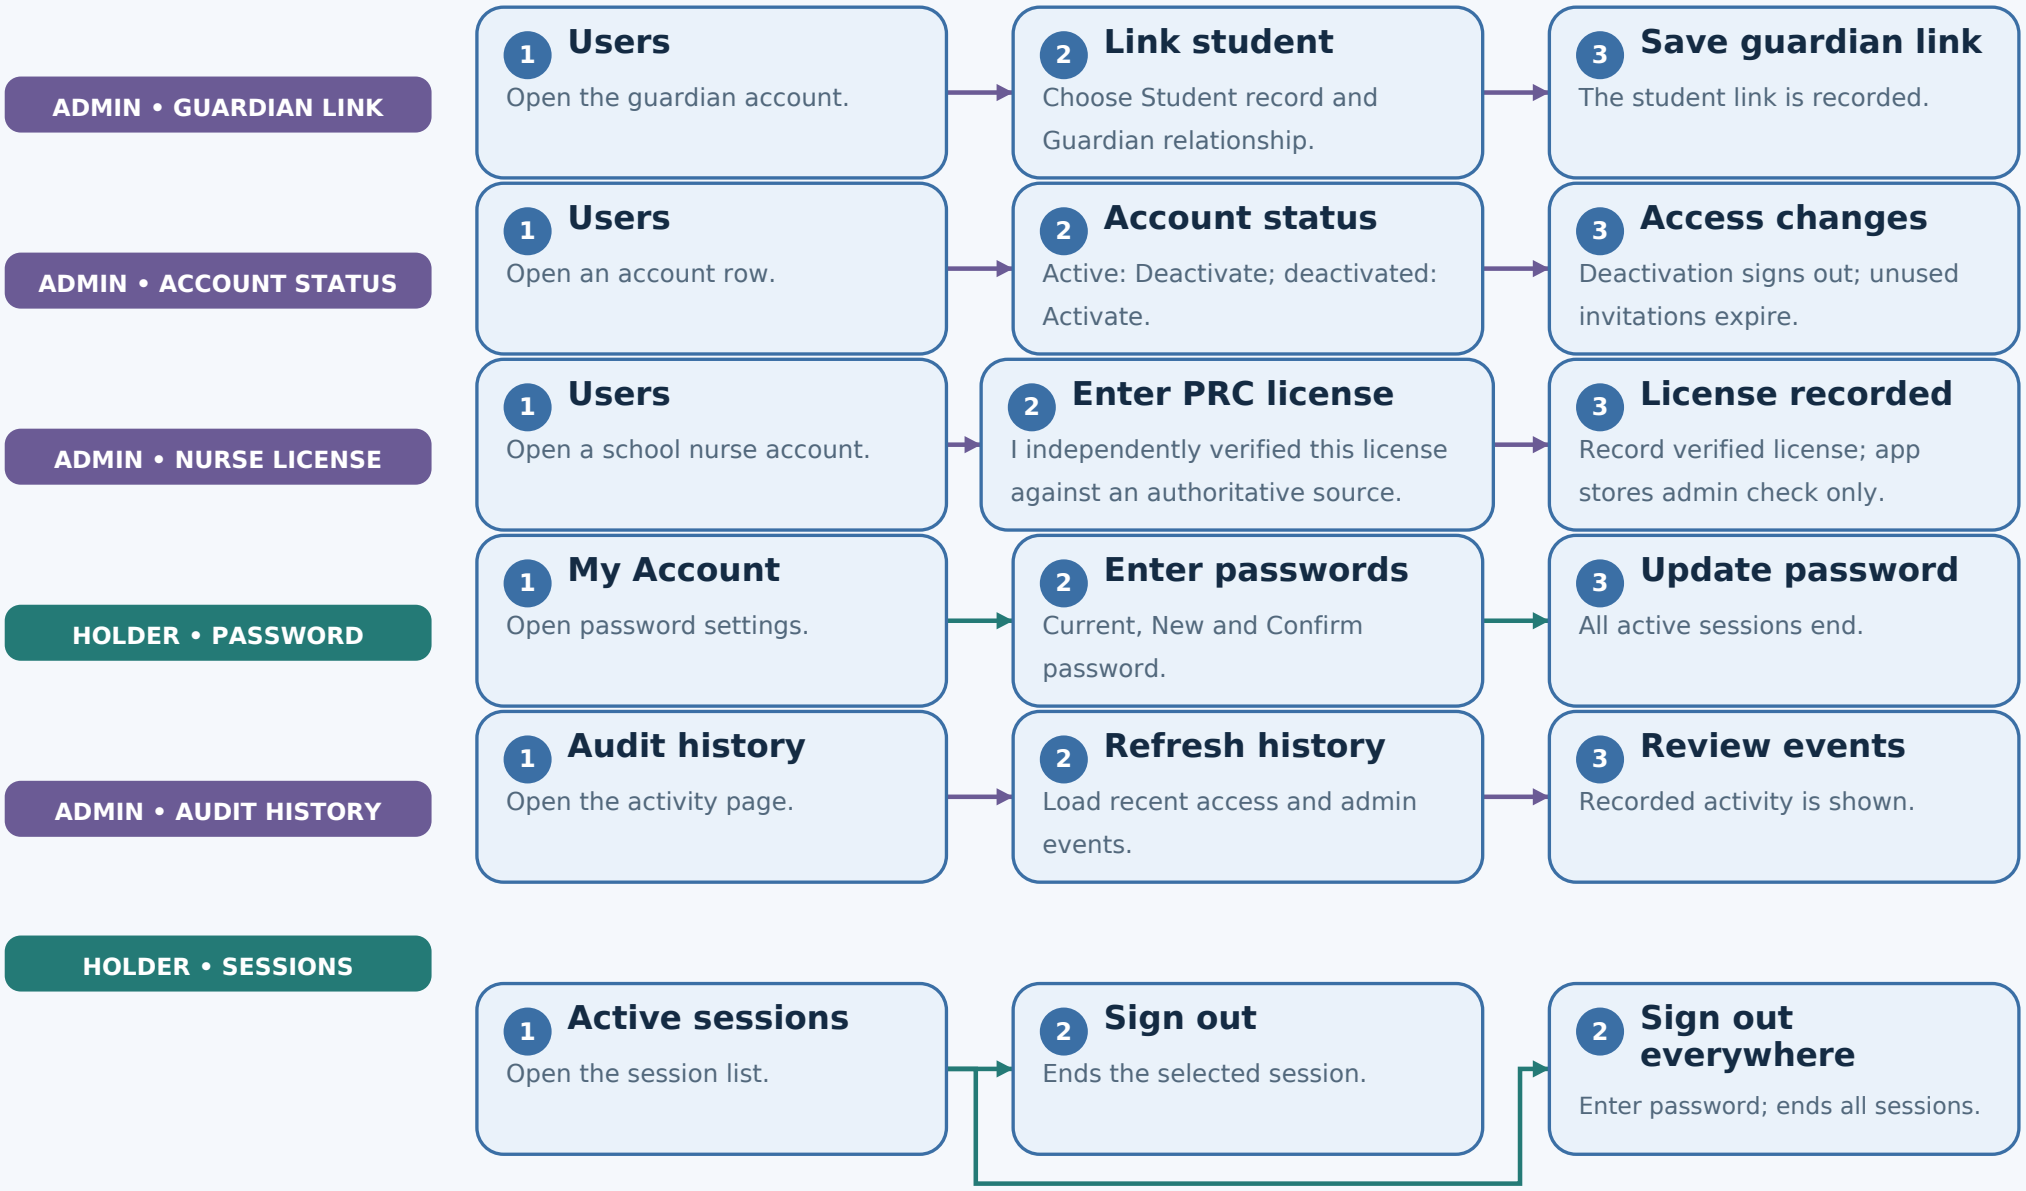

Production requires email verification. A configured development demo can skip the code; email delivery is not guaranteed.

03

ACCOUNT ACCESS

Change account access and review security activity

Each row is a separate task; the rows do not depend on one another.

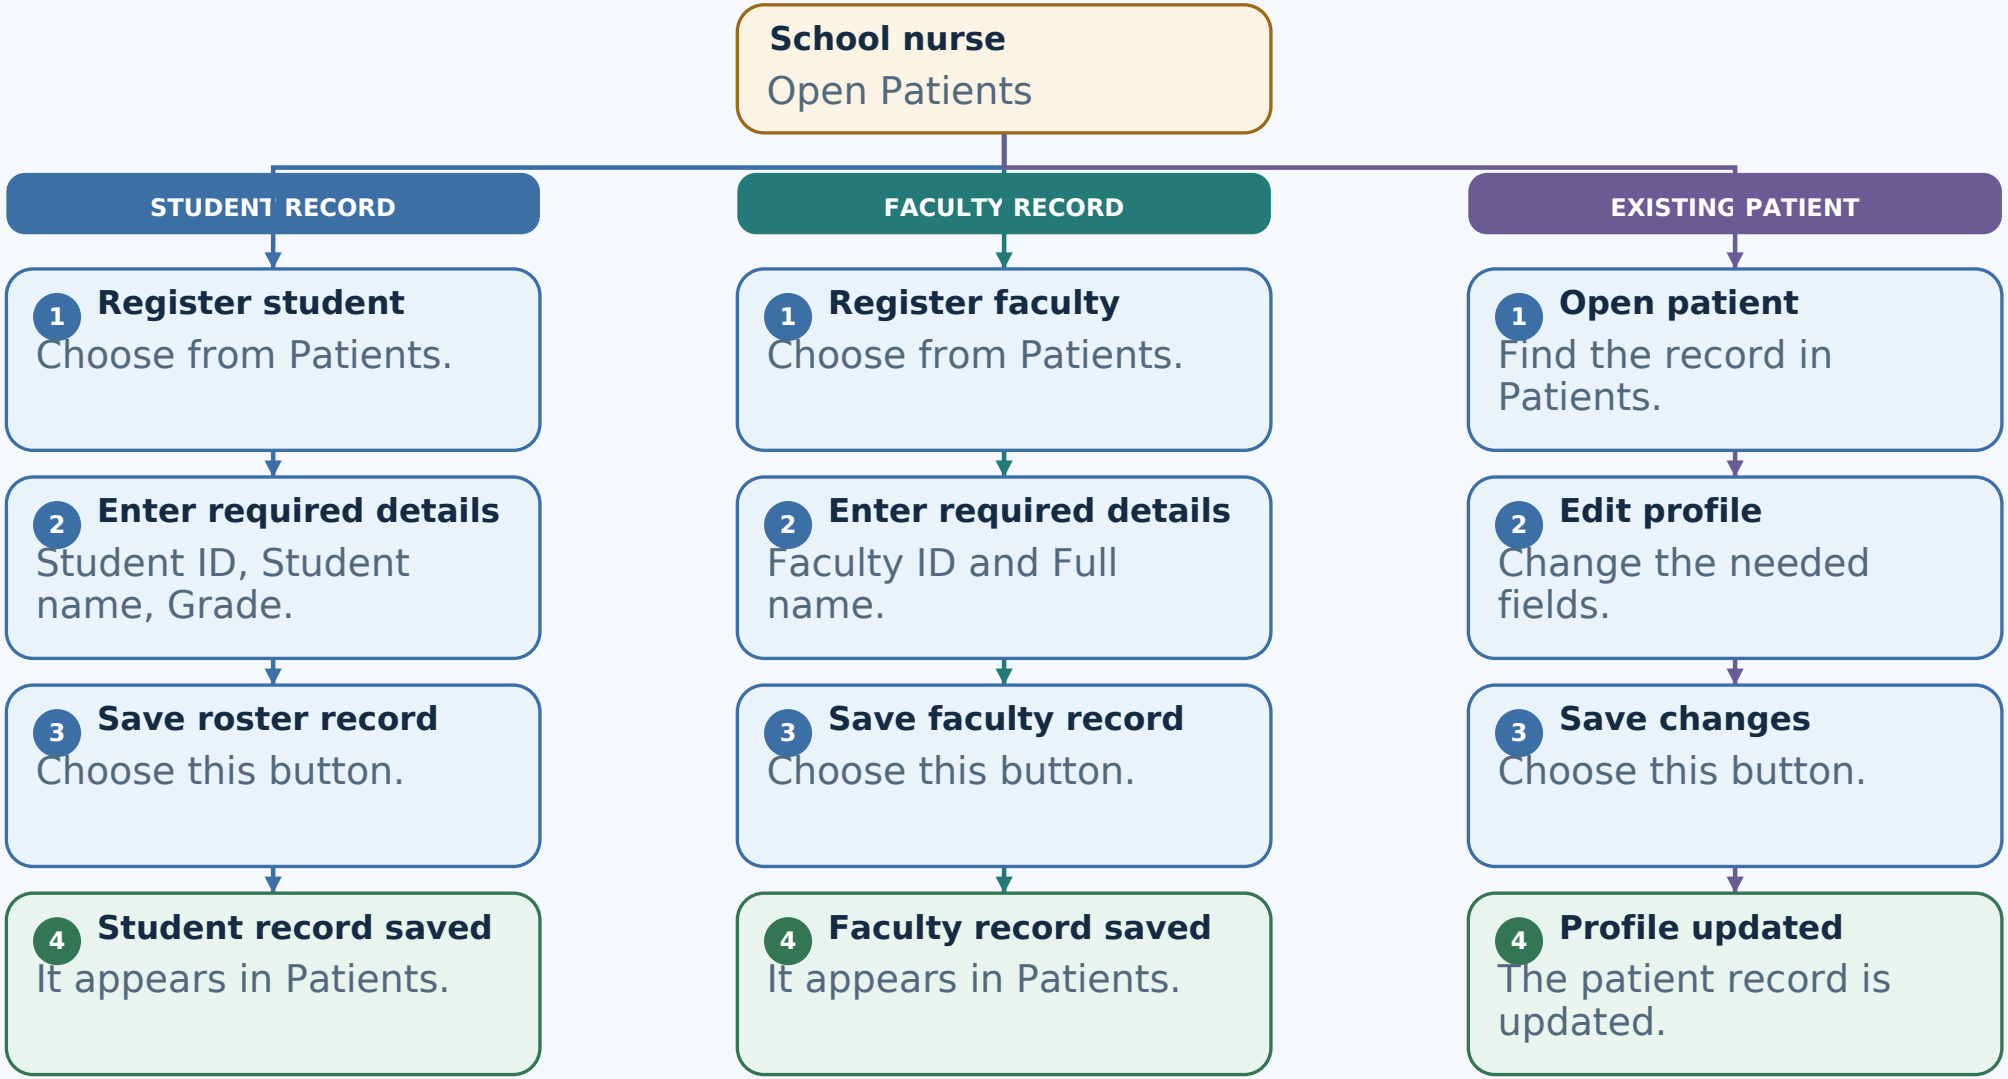

04

PATIENT RECORDS

Register or update a patient record

The school nurse chooses one of three actions from Patients; each path saves its own result.

Students and faculty are patient records, not sign-in accounts.

Registration/import: Kindergarten–Grade 10. Edit profile lists Grades 1–12 and omits Kindergarten.

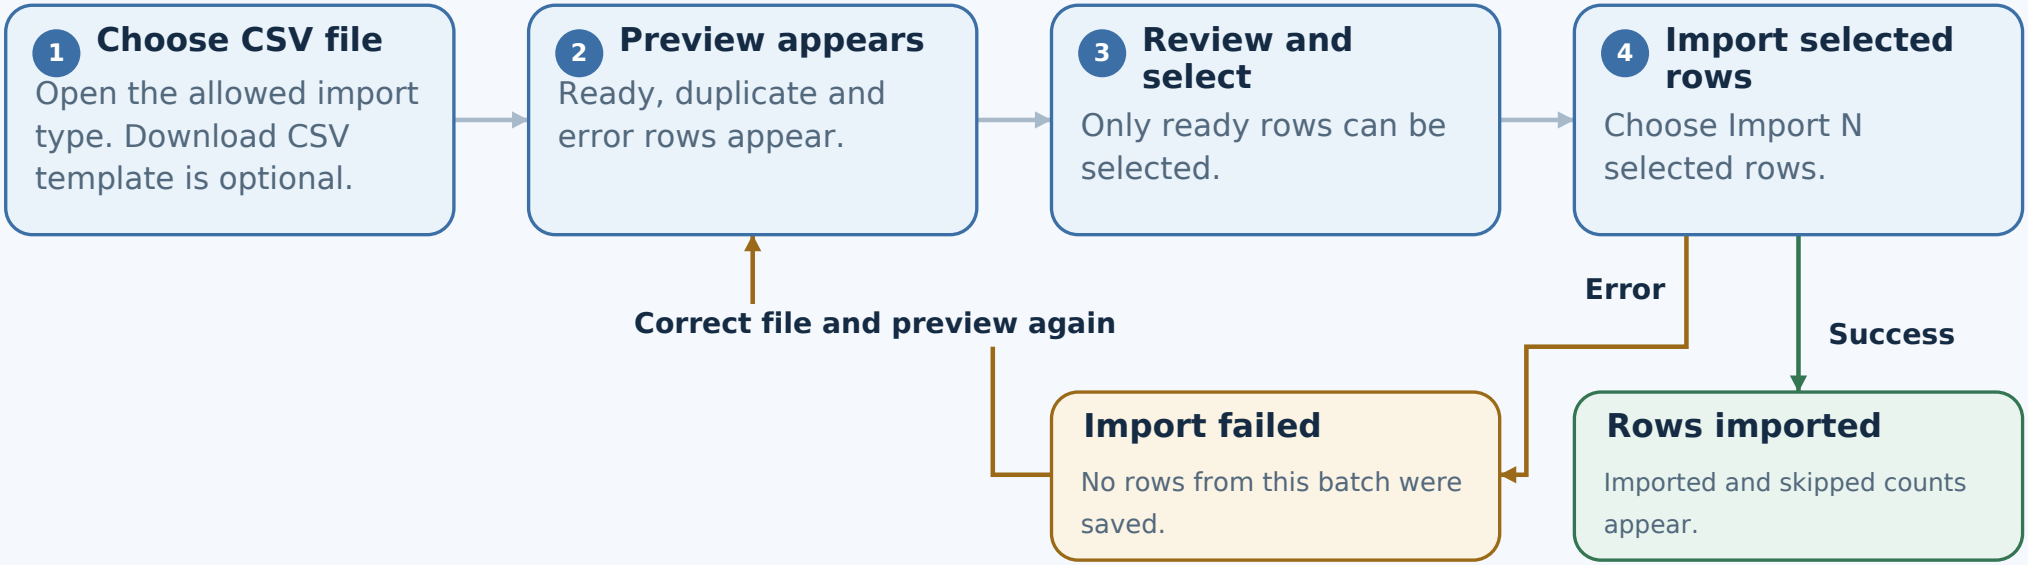

05

DATA & IMPORTS

Import records from a CSV file

Choose only an import type allowed for your account; review rows before any save.

ACCESS: STUDENT ROSTER — ADMINISTRATOR • FACULTY — ADMINISTRATOR OR NURSE • HISTORICAL VISITS — NURSE ONLY

For duplicates, choose “Skip duplicates and import selected new rows” or “Cancel this import.”

Optional: if you need to undo the import, choose the displayed Roll back this batch before leaving or replacing it. It applies only to the current batch; later edits, guardian links or clinic activity may block rollback. Student roster/rollback: administrator; faculty: administrator or nurse; historical visits/rollback: nurse.

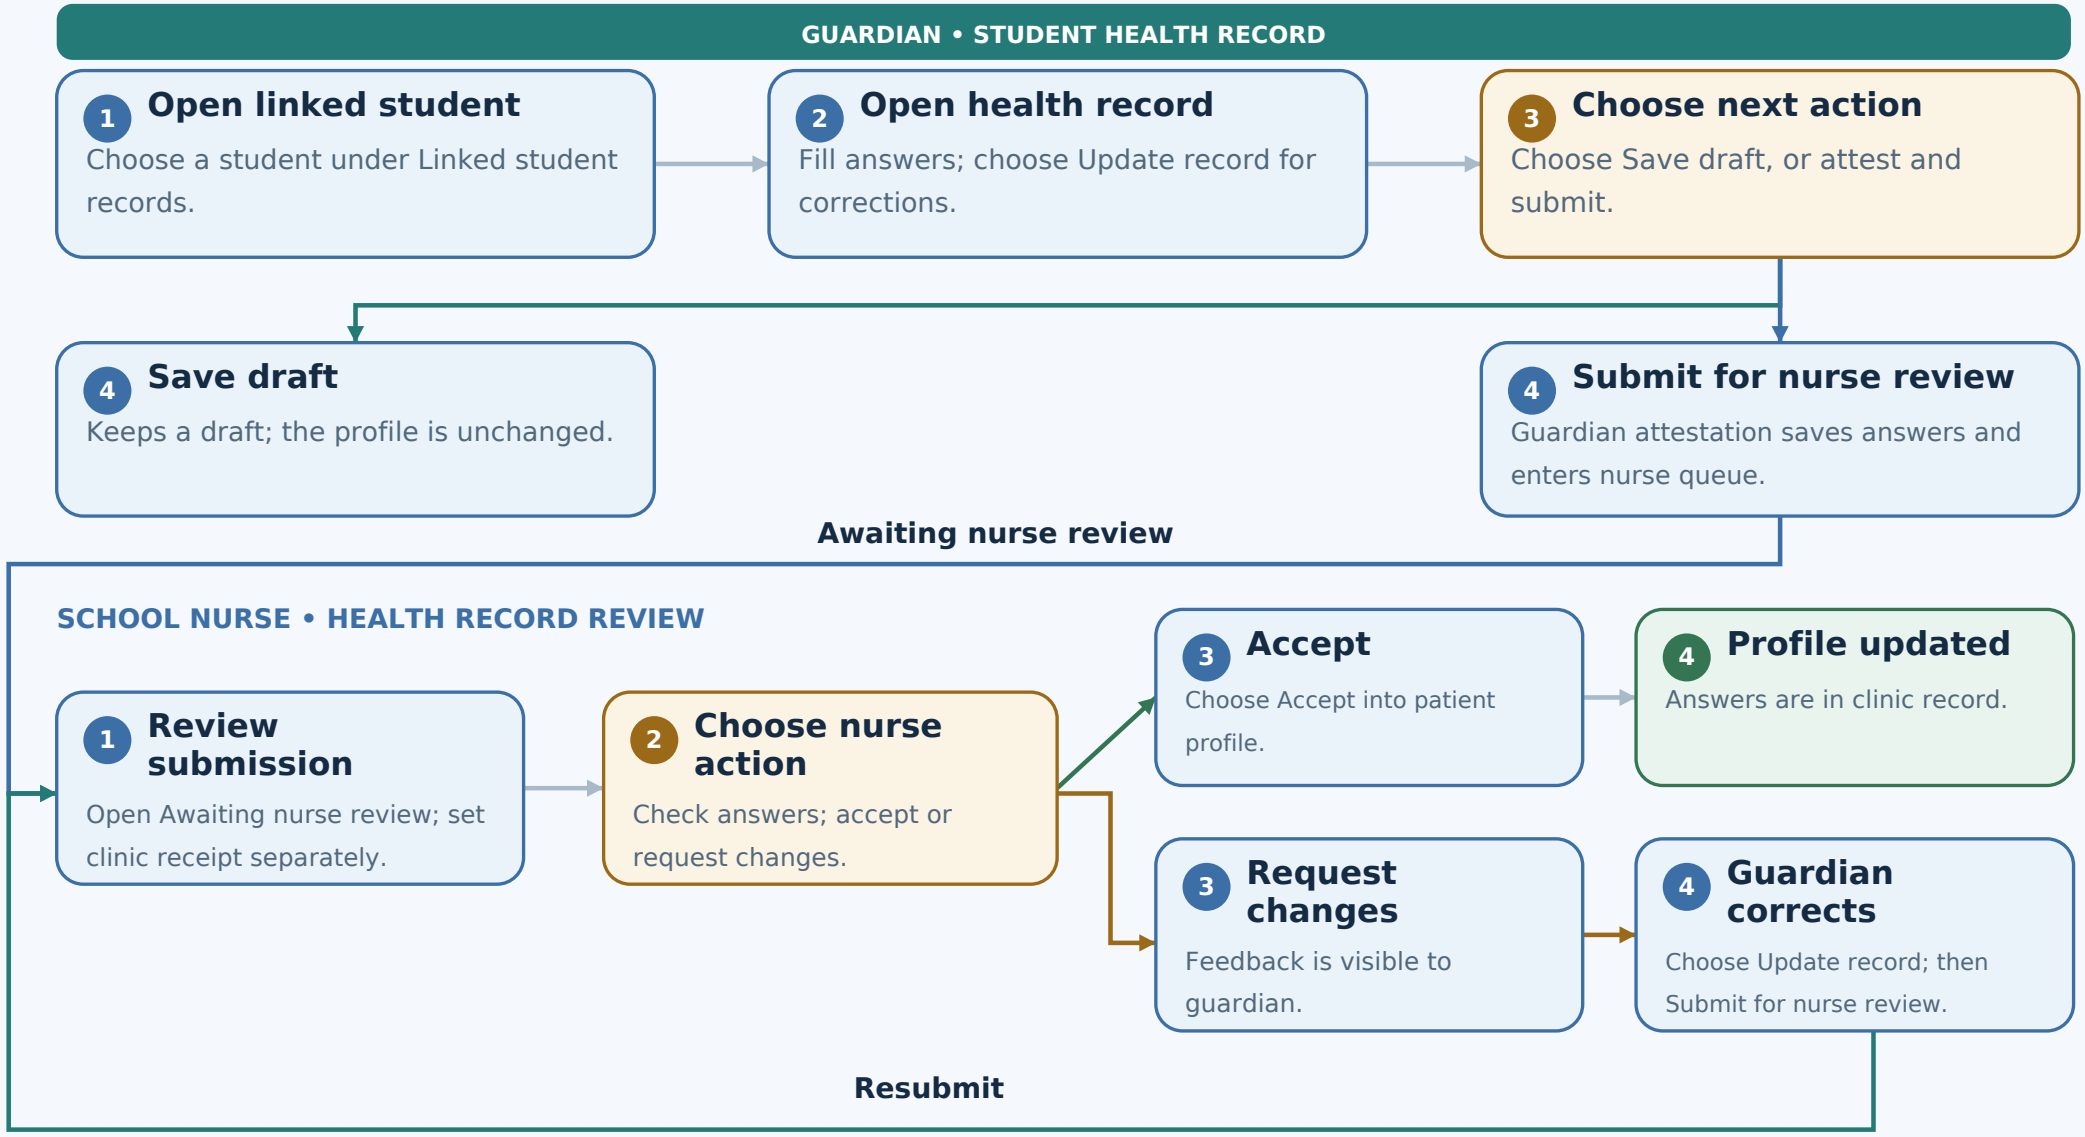

Historical visit import is available to nurses, but historical clinical record migration is outside the current study scope.

06

HEALTH RECORDS

Submit and review an online student health record

Nurse review is marked Review before live use; school approval remains pending.

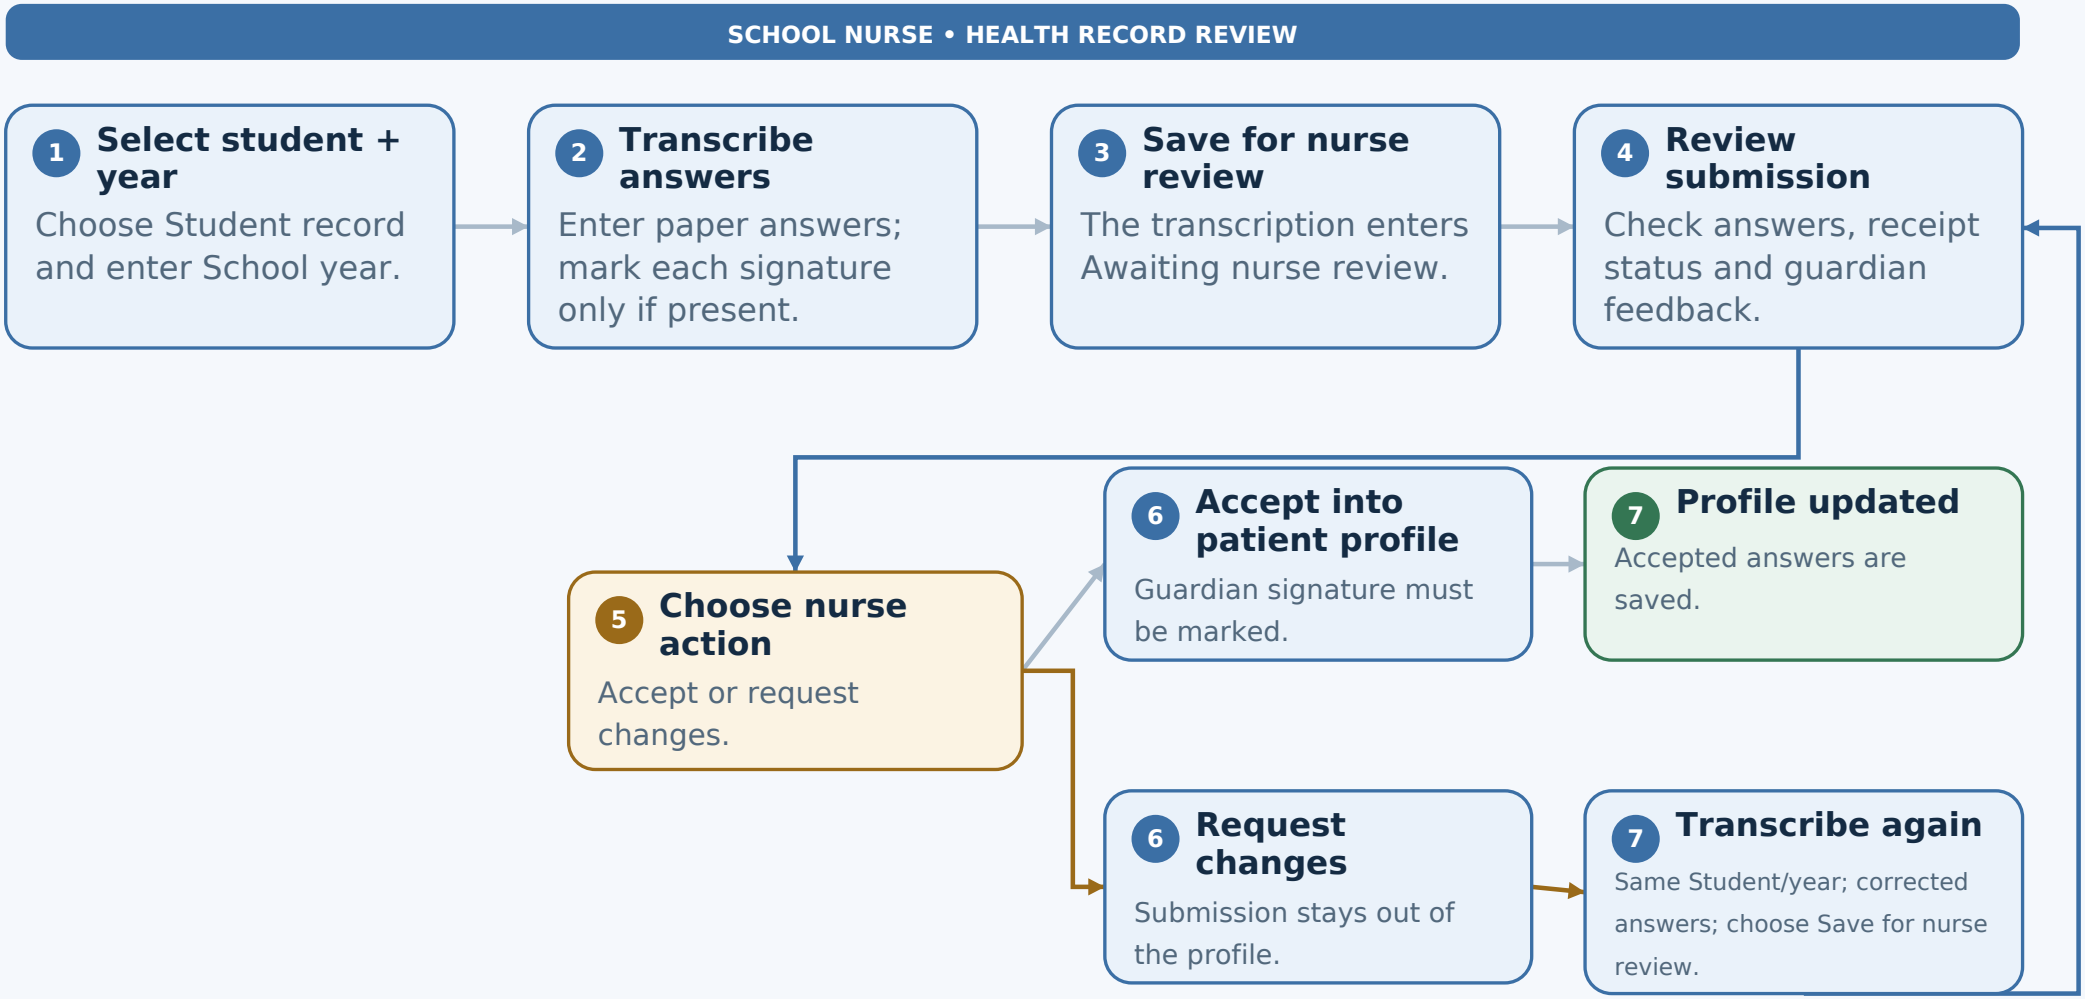

07

HEALTH RECORDS

Transcribe and review a paper health record

The app records whether signatures were present; it does not store a paper image.

After the corrected paper form is obtained offline, the nurse uses Save for nurse review to add a new revision. Mark Guardian signature only if present; without it, Accept into patient profile is blocked. Student signature is recorded; school approval remains pending.

08

PATIENT CARE

Record a student’s clinic arrival

Arrival is a separate event. It does not save a clinic visit.

SCHOOL NURSE • NEW VISIT

1 Choose patient

Select the student under Patient.

2 Record arrival & notify guardian

Choose this action to record the arrival event.

3 System records event

The screen shows the event and notification delivery status.

4 Arrival recorded

Continue separately with Save visit after care is provided.

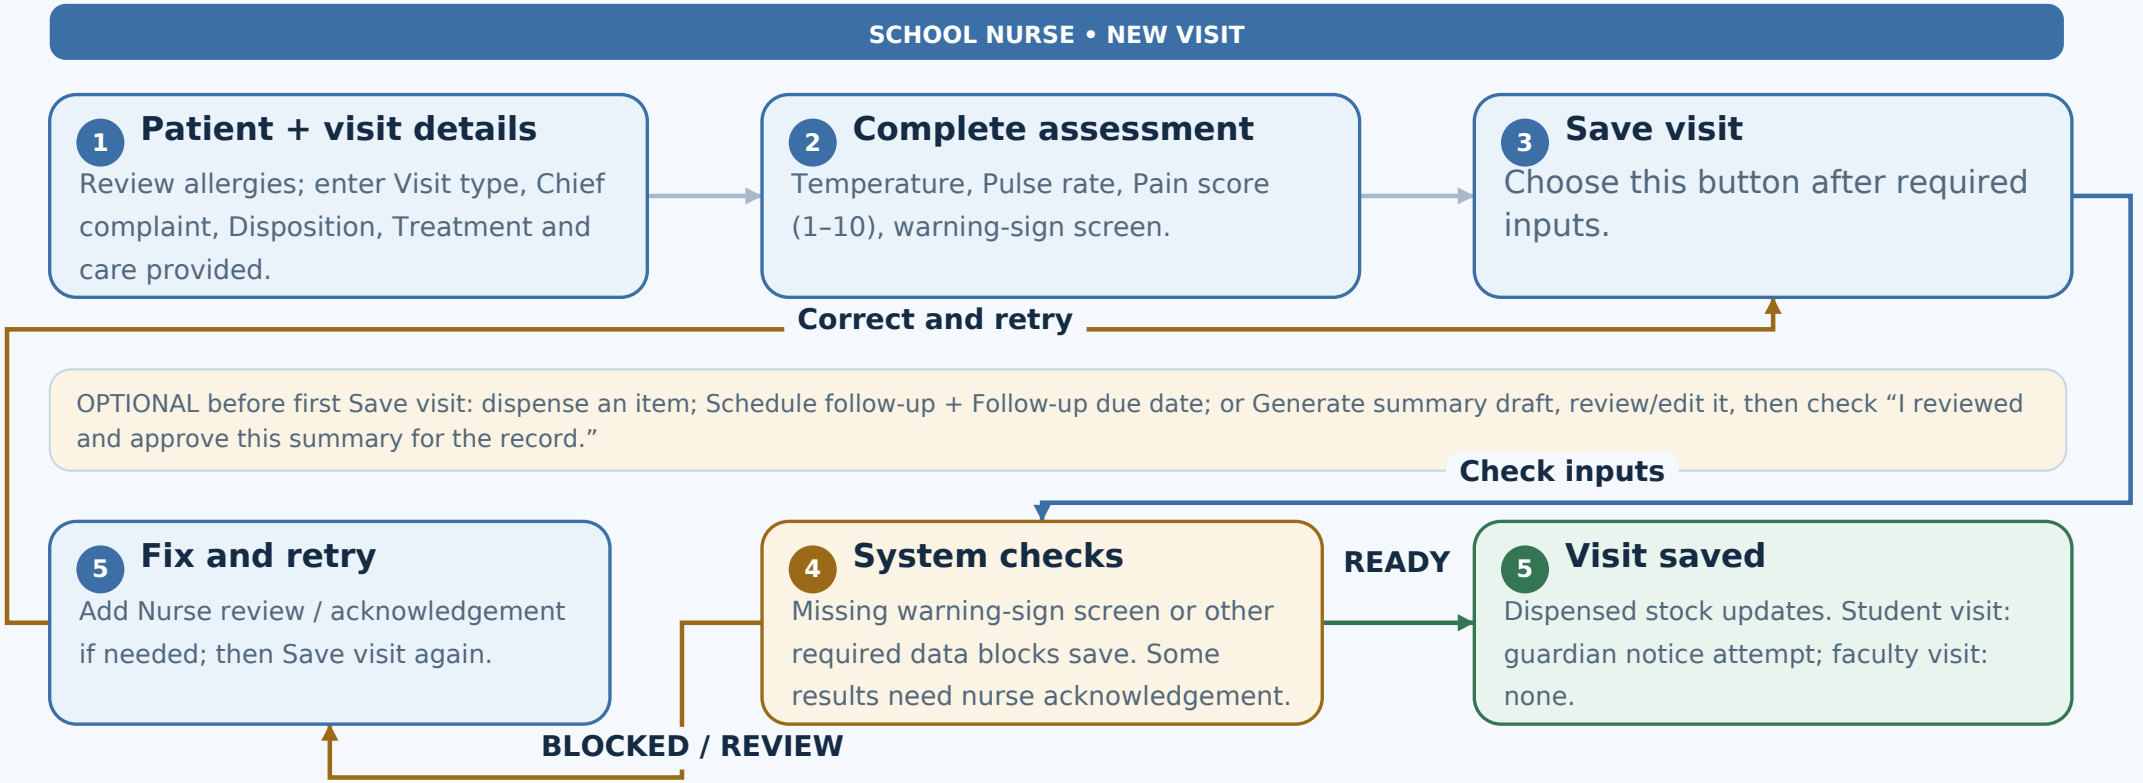

Retrying the same arrival request reuses the event; a new request can record another event. A guardian notice is attempted for a linked student.

09

PATIENT CARE

Record a clinic visit and any care given

Optional care happens before the first save; the system checks inputs when the nurse chooses Save visit.

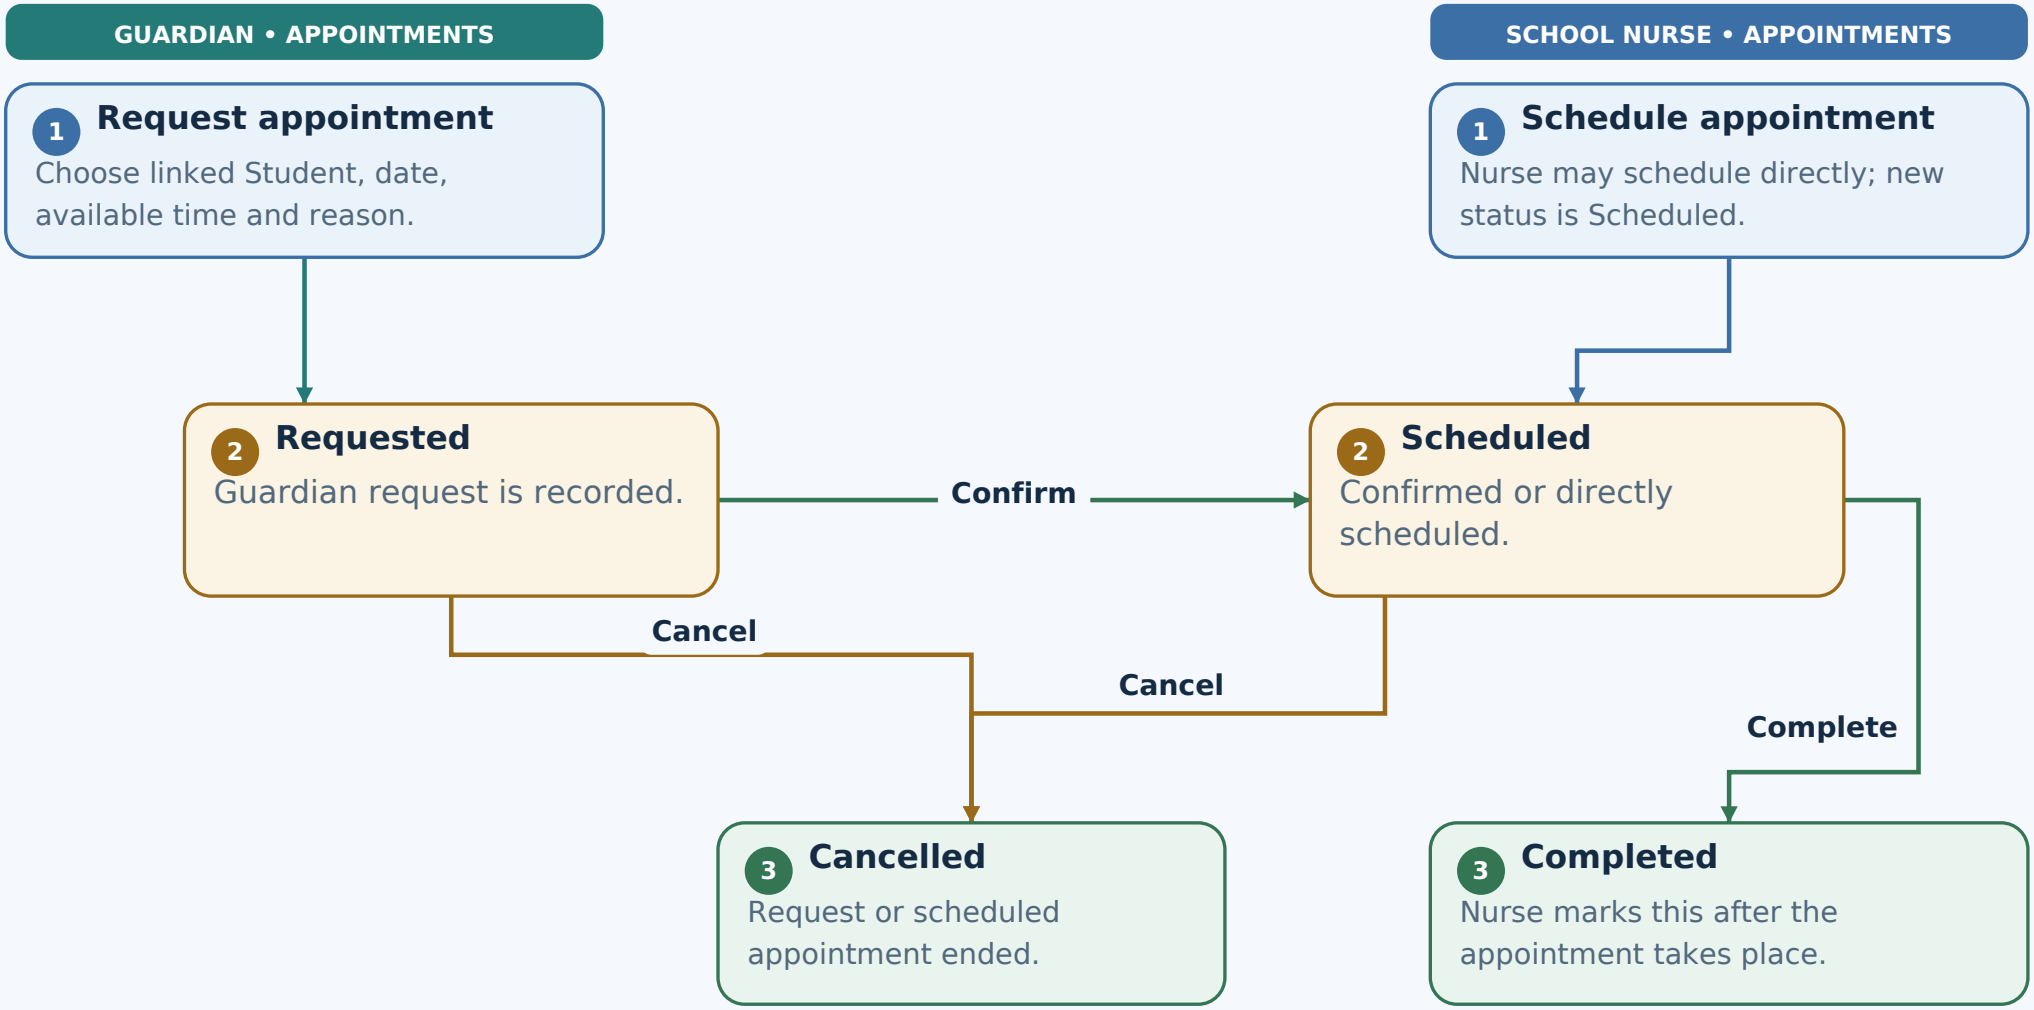

Temperature-only exception: active “WHO IITT-informed partial screening (draft)” plus Nurse review / acknowledgement. The warning-sign screen and all other required data are still needed.

If save is uncertain, Retry same visit. If a saved-record conflict appears, Review patient history before starting another visit. Summary text saves only after nurse review and approval.

SCHEDULING

Manage appointments

Only the school nurse can change appointment status on this screen; no Reject action is available.

Reschedule an open Requested or Scheduled appointment with Reschedule, New date and time, then Save new time; status stays open. Complete changes status only; it does not save a clinic visit.

CLINIC OPERATIONS

Maintain clinic inventory and restock items

Add, edit and restock are separate actions. The saved stock record is used by visit dispensing.

SCHOOL NURSE • INVENTORY

NEW ITEM

1. **Add item**
   Choose Add item in Inventory.
2. **Enter item details**
   Name, type, category, starting stock, unit, reorder level.
3. **Add item**
   Saves the new inventory item.

EDIT ITEM

1. **Edit item**
   Choose Edit on an existing item.
2. **Change item details**
   Update the fields that need correction.
3. **Update item**
   Saves the changed item.

RESTOCK

1. **Restock item**
   Choose Restock on an item.
2. **Record receipt**
   Enter Quantity received and Reason.
3. **Confirm restock**
   Adds the received quantity to stock.

At or below reorder level shows Low stock. Archive hides an item; Restore returns it to active inventory. Stock, item type and expiry checks still apply to dispensing. No purchase-request or approval flow is available.

COMMUNICATIONS

Track consent and process due reminders

Nurse saves consent status; administrator separately runs reminders.

SCHOOL NURSE • PATIENTS • CONSENT TRACKING

1. **Open student**
   Find the patient in Patients and open Consent tracking.
2. **Set consent status**
   Choose Consent status; enter Due date only when status is Pending.
3. **Save consent status**
   Choose this button; status is recorded.
4. **Consent status saved**
   Signed forms are not uploaded or stored here.

ADMINISTRATOR • COMMUNICATIONS

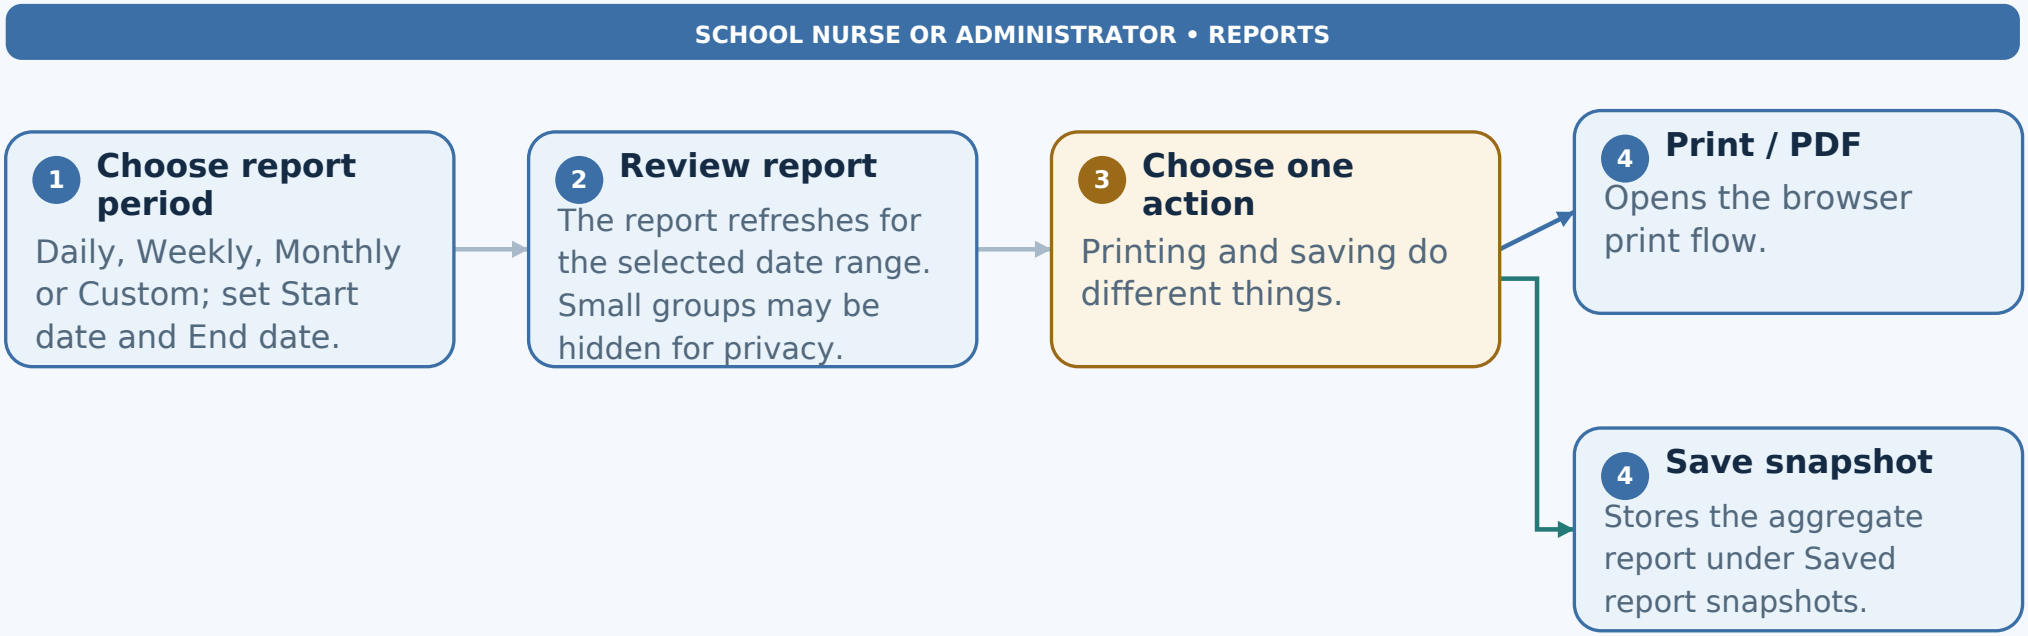

1. **Run due reminders**
   Choose this button in Communications.
2. **System checks dates**
   Due today, overdue or within 30 days; recurring visits 3+ in 90 days.
3. **Create notices**
   Repeated runs do not send the same reminder again.
4. **Delivery result**
   In-app notices created; email attempted. Failed email is not retried.

The screen reports failures or unconfirmed delivery.

REPORTS

View, print and save a report

Filtering refreshes the aggregate report; printing and saving are separate choices.

Print / PDF does not save a snapshot. Save snapshot does not print or export the report.

COMMUNICATIONS

Send a clinic notice

The administrator selects active account roles, confirms the message, then sends it.

SYSTEM ADMINISTRATOR • COMMUNICATIONS

1 Write notice
Choose Notice type; enter Subject and Message.

→

2 Choose recipients
Select one or more active roles under Send to active accounts.

→

3 Confirm notice
Check “I’ve checked the message and selected recipient roles.”

→

4 Send clinic notice
Creates in-app notices and attempts email delivery.

The screen reports recipient count, notices, emails sent and failures. Failed emails are not automatically retried.

RISK RULES

Save and approve a risk-rule version

Administrator prepares a draft; a verified school nurse approves the version for use.

SYSTEM ADMINISTRATOR • RISK RULES • ADVANCED: MANAGE CUSTOM RULES

1. **Create or copy rule**
   Use the builder or copy a saved rule.
2. **Save candidate**
   WHO option may say Save candidate for nurse review.
3. **Draft is saved**
   Current approved rule stays in use until approval.

SCHOOL NURSE • AFTER ADMINISTRATOR RECORDS VERIFIED LICENSE

1. **Open saved draft**
   Review the rule and version.
2. **Approve and use version N**
   Verified license check is required.
3. **Version N active**
   Later visits use it; prior approved version is retired.

Clinical review and school approval are required before live use; activation alone does not prove validation. Sample risk rules are demonstration-only and used only when no custom rule is approved.
